

CERTIFICATE «CLEANER PRODUCTION» FOR «SOJAPROTEIN»A.D.

On December 18, 2008 the Serbian Chamber of Commerce awarded official certificates for the successfully completed project "Cleaner Production", where SOJAPROTEIN AD company was also present among eight other companies.

The "Cleaner Production" project is part of the United Nations Industrial Development Project (UNIDO), carried out in Serbia by the Center for Cleaner Production. This project is a preventive approach to environmental protection, as opposed to standard approaches determined to date. The principles of cleaner production emphasize the prevention of creating waste, rather than its treatment once it was created, as well as more rational management of energy, raw materials and other resources. In addition to the advantages and savings through the introduction of Cleaner Production this project can bring, this is also SOJAPROTEIN's first step in collecting information and documentation for the procedure of obtaining the IPPC license (integrated prevention and control of environmental pollution) .
